Understanding the Scope of Electronic Health Information (EHI) for the Purposes of the Information Blocking Definition

Protected Health Information (PHI)

Electronic PHI (ePHI)

EHI = all ePHI in the DRS

On and after October 6, 2022
The information blocking definition includes the entire scope of the Electronic Health Information (EHI) definition (i.e., ePHI that is or would be in a Designated Record Set (DRS)) *

EHI = USCDI v1

Prior to October 6, 2022
The information blocking definition is limited to the EHI identified by the data elements represented in the United States Core Data for Interoperability (USCDI) v1 *

Note #1: The infographic is not intended to depict the actual scope of each category of health information in a designated record set. For example, a DRS may consist of no paper records and EHI identified by only the data elements represented in the USCDI v1.

Note #2: Actors (45 CFR 171.102) not covered by HIPAA should familiarize themselves with this infographic and with HIPAA terms, and should assess what information they have that would be considered records that align with those included in the DRS. Such information is EHI for purposes of the information blocking definition.

* EHI includes electronic protected health information (ePHI) to the extent that it would be included in a designated record set (DRS), regardless of whether the group of records is used or maintained by or for a covered entity or business associate. EHI does not include: psychotherapy notes as defined in 45 CFR 164.501; or information compiled in reasonable anticipation of, or for use in, a civil, criminal, or administrative action or proceeding. 45 CFR 171.102
