Software Updates

Bugs addressed in 4.0.2 patch release

- An “Assessment, Performed” Result should not be reported in a nested Result Template. (CYPRESS-1498, CYPRESS-1544)
- ‘Randomized’ patient birthdate can cause calculation errors. (CYPRESS-1503)
- Confusing display of Direct Reference Codes in “C4 Filter Tests.” (CYPRESS-1533)
- Use updated ‘Related To’ template instead of ‘Fulfills’ for C1 Record Sample test. (CYPRESS-1537)
- Strictly enforce the existence of a code-negation pair within the same entry for C1 Record Sample verification. (CYPRESS-1538)
- Do not export patients using the ‘Other’ code 2131-1. (CYPRESS-1539)
Software Updates

Bugs addressed in 4.0.2 patch release

Cypress v4.0.2
The Cypress 4.0.2 patch is scheduled for release on 1/31/18. Changelog for the release is below.

Cypress Bugs Addressed
- An “Assessment, Performed” Result should not be reported in a nested Result Template. (CYPRESS-1498, CYPRESS-1544)
- Randomized patient birthdate can cause calculation errors. (CYPRESS-1503)
- Confusing display of Direct Reference Codes in “C4 Filter Tests.” (CYPRESS-1533)
- Use updated ‘Related To’ template instead of ‘Fulfills’ for C1 Record Sample test. (CYPRESS-1537)
- Strictly enforce the existence of a code-creation pair within the same entry for C1 Record Sample verification. (CYPRESS-1538)
- Do not export patients using the ‘Other’ code 2131-1. (CYPRESS-1539)
- An id not required in the Encounter Performed Act template in QRDA Category I B. (CYPRESS-1541)

C4 Filter does not display correct code or value set for Problems

Details:
- **Type:** Bug/Issue
- **Status:** IN PROGRESS
- **Priority:** Moderate
- **Resolution:** Unresolved
- **Labels:** KnownBug4.0.1

Description:
- We are going through certification in just a few hours and are seeing the following filter criteria for C4:
  - Problems SNOMEDCT codes in Congenital absence of cervix (disorder) (code: drc-2ee01847828e295f298f928285dc7f4e47c73f5990a1ce12a00e6d25f16e91e47e)
- My assumption is that this is happening because the code is not contained in a value set but rather as a cqf “code” element as follows:
  - code “Congenital absence of cervix (disorder)”: ‘376870000’ from ”SNOMEDCT:2017-09”

Record Sample Bugs in 4.0.2 patch release

CYPRESS Issue Tracker / CYPRESS-1619

Immunization, administered not complete for Record Sample test

Details
Type: Bug/Issue
Priority: Moderate
Resolution: IN PROGRESS
Labels: KnownBug4.0.2, RecordSampleBug

Description
Duplication of issue on google group for tracking purposes.
Record Sample test for CMS 127v7 may include an Immunization, Administered data criteria. When this is correctly put into a file, it is not an authorization in an element for which there is no authorDateTime element because as the implementation guide is used for the authorDateTime element in question.

4.0.2 Record Sample Bugs

- **CYPRESS-1619**: Immunization, Administered authorDatetime in Record Sample
- **CYPRESS-1627**: Substance, Administered template not found in Record Sample submissions
- **CYPRESS-1629**: Criteria (LDL-c) in CMS105v7 causes error when accessing Record Sample

**Workaround:**
- Only necessary if Record Sample Test is generated with problematic criteria
- That data criteria may be swapped out for any other available data criteria option
- May reach out to ATL to edit the test and swap this criteria
- Search with `labels = KnownBug4.0.2 AND labels = RecordSampleBug` to find marked relevant bugs
## Cypress Versions

</table>
What is in a Cypress Bundle?

- Cypress Bundles are used to populate a Cypress Database with the following information
  - eCQM specifications
    - For a specific CMS Annual Update
  - eCQM Value Set
    - For a specific CMS Annual Update (or CMS Value Set Addendum)
  - Master Patients
    - Manually created by the Cypress team

- Once a Bundle is loaded into the Cypress Database, it can be used to generate tests using the eCQM specifications and value sets in the selected bundle. These tests will include randomized test patients based on the ‘Master Patients’ in the bundle
When are Cypress Bundles released?

- For the CMS Annual Update:
  - The CMS Annual Update is usually published in May
  - A Cypress Bundle for the Annual Update is typically published in July
  - All version #’s for a specific Annual Update will start with year the Annual Update was released
    - e.g., 2018.x.x

- When CMS publishes an addendum release for the value sets:
  - For the last 2 years, CMS has published addendum value sets in September
  - Cypress has published update bundles in October
    - Versioning scheme starting in 2018
      - All version #’s using a specific set of value set will share the same second digit
        - 2018.0.x (using the value sets at the time of the Annual Update publication)
        - 2018.1.x (using the value sets at the time of the first addendum value set publication)

- If a bug is identified in Cypress test patients
  - Cypress will publish an updated bundle with updates to the test patients
  - This will result in incrementing the third digit of the Cypress bundle
    - e.g., 2018.1.1
When should Cypress Bundles be retired?

- The eCQM specifications published in the CMS Annual Update are only used for a single reporting year.
- For example, the eCQMs published by CMS in May 2017 will be used to evaluate clinical data captured during Calendar Year 2018.
- The submission window for this data ends in the spring of the year following data collection.
- Cypress bundles should not be used after the submission window for a specific Annual Update has closed.

</table>
Why should Cypress Bundles be retired?

- The benefits of certification with an outdated bundle are limited as the Health IT system will need to be updated prior to reporting.

- Retiring old bundles is consistent with ONC’s guidance
  - “We strongly encourage [Electronic Health Record] technology developers to update to the newest CQMs specifications as they become available since those updates include new codes, logic corrections and clarifications”

[42 Question [06-13-042-1]]

What is the relationship between EHR certification and the annual CQM specification updates released by CMS?

ONC and CMS have received many questions related to this topic, which are reflected below. These responses are from both ONC and CMS.

Question 1: When new versions of CQM specifications are released by CMS, do EHR technology developers need to seek retesting/recertification of their certified Complete EHR or certified EHR Module in order to keep its certification valid?

ONC/CMS Response: No. The minimum version required for 2014 Edition certification is the version of CQM specifications released by CMS in December 2012. EHR technology that has been issued a certification based on the December 2012 version will remain certified even when CMS releases new versions of CQM specifications.

We strongly encourage EHR technology developers to update to the newest CQMs specifications as they become available since those updates include new codes, logic corrections and clarifications. We also recommend EHR technology developers consider that other CMS programs (beyond the EHR Incentive Programs) and other private sector programs generally update CQMs on an annual basis. As a result, an EHR technology developer’s customers continued ability to successfully participate and report in those other programs could be impacted if the CQM data generated by the EHR technology is based on older specification versions (and no longer accepted by the other programs).
