

The Office of the National Coordinator for
Health Information Technology

Assessing EHR Implementation Decisions to Improve Usability and Reduce Burden for Clinicians

PRESENTERS

- Jonathan Wald, MD, MPH
Director of Digital Health,
RTI International

- Laura Marcial, PhD Health
Research Scientist, RTI
International

- Aaron (Zach) Hettinger, MD,
MedStar Health National
Center for Human Factors in
Healthcare

- Raj Ratwani, PhD
Director of the MedStar
Health National Center for
Human Factors in
Healthcare

- Justin Cross, MD
ONC Medical Director for
Systems Safety, US
Department of Health &
Human Services

- Moderator:
LaVerne Perlie MSN, RN
ONC Health Scientist, US
Department of Health &
Human Services

Project background

- Jonathan Wald, MD, MPH
Director of Digital Health,
RTI International

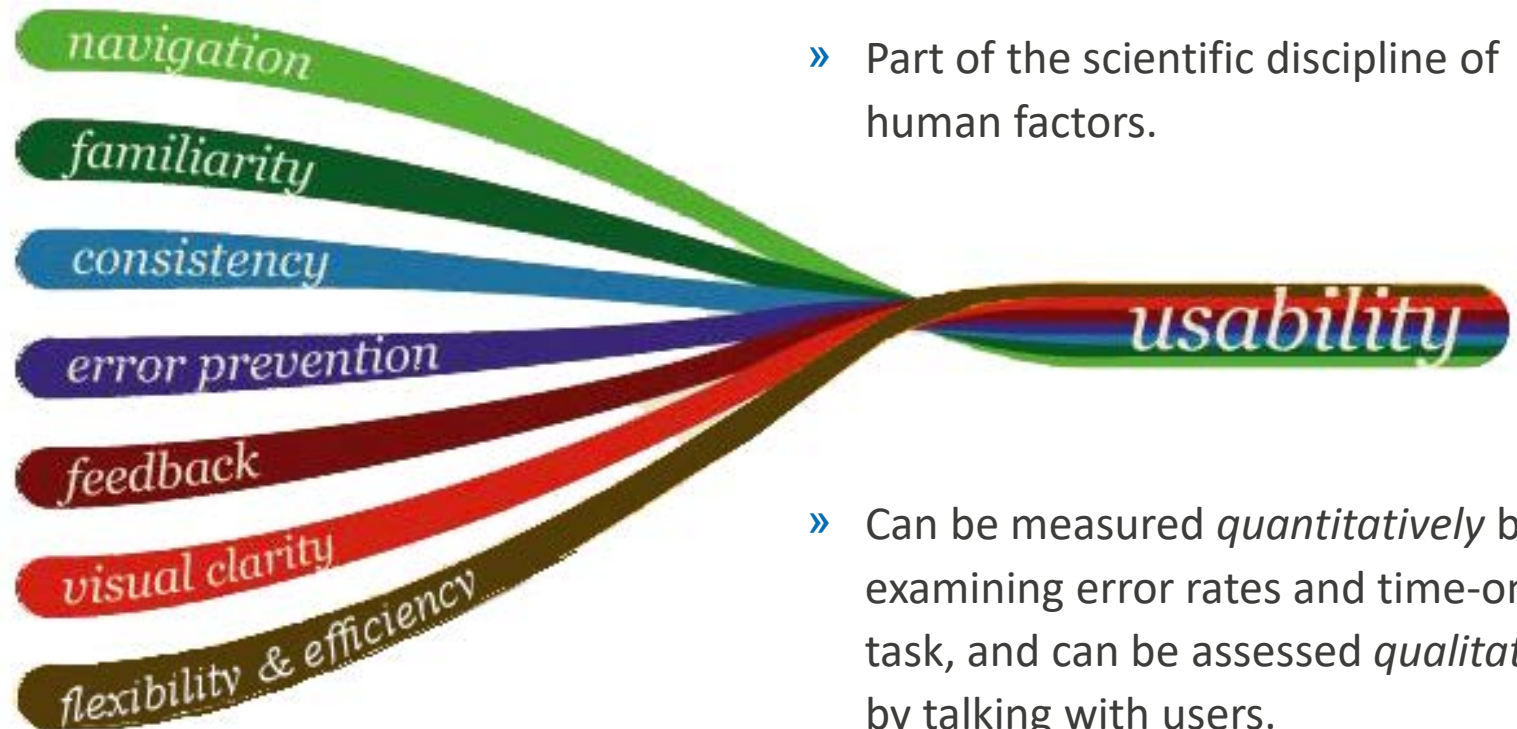

EHR Users are facing critical usability problems

- **Go-live is just the beginning!**
 - » Many usability problems surface after an EHR is in regular use
 - » Making changes, and testing the changes to improve usability, are essential activities
 - » Medium-to-low-resource practices have limited time and know-how to address usability challenges

What is Usability?

- **Usability:** the extent to which a system supports a user to efficiently and effectively achieve desired goals ¹

EHR Users are facing critical usability problems

- Ratwani et al (2016) findings from interviews and a literature review on usability and EHR implementation:
 - » Products implemented differed considerably from products demo'd
 - » Few practical tools to identify usability-related safety issues
 - » EHR customization not informed by human factors principles can add to risk
 - » Workflow decisions are often uninformed by best practices
 - » Limited improvements or ongoing training after go-live are typical
- Smaller healthcare practices and institutions need to:
 - » Select products with high marks for UCD
 - » Implement with appropriate expertise and support
 - » identify EHR aspects that *should be* customized
 - » identify and ameliorate usability-related issues in implemented systems

To promote usability...

- A Change Package is being developed
 - » To collect and present resources that enable and accelerate usability improvements
 - » Targeted toward users who are EHR implementers and QI project leaders
 - » Serving practices having medium-to-low resources

Project approach

- Resources

- » Identify and collect an initial set of resources
 - Publicly available
 - Helpful to non-experts
- » Test those resources in-the-field
- » Produce a Final Change Package and guide for its use, including case examples

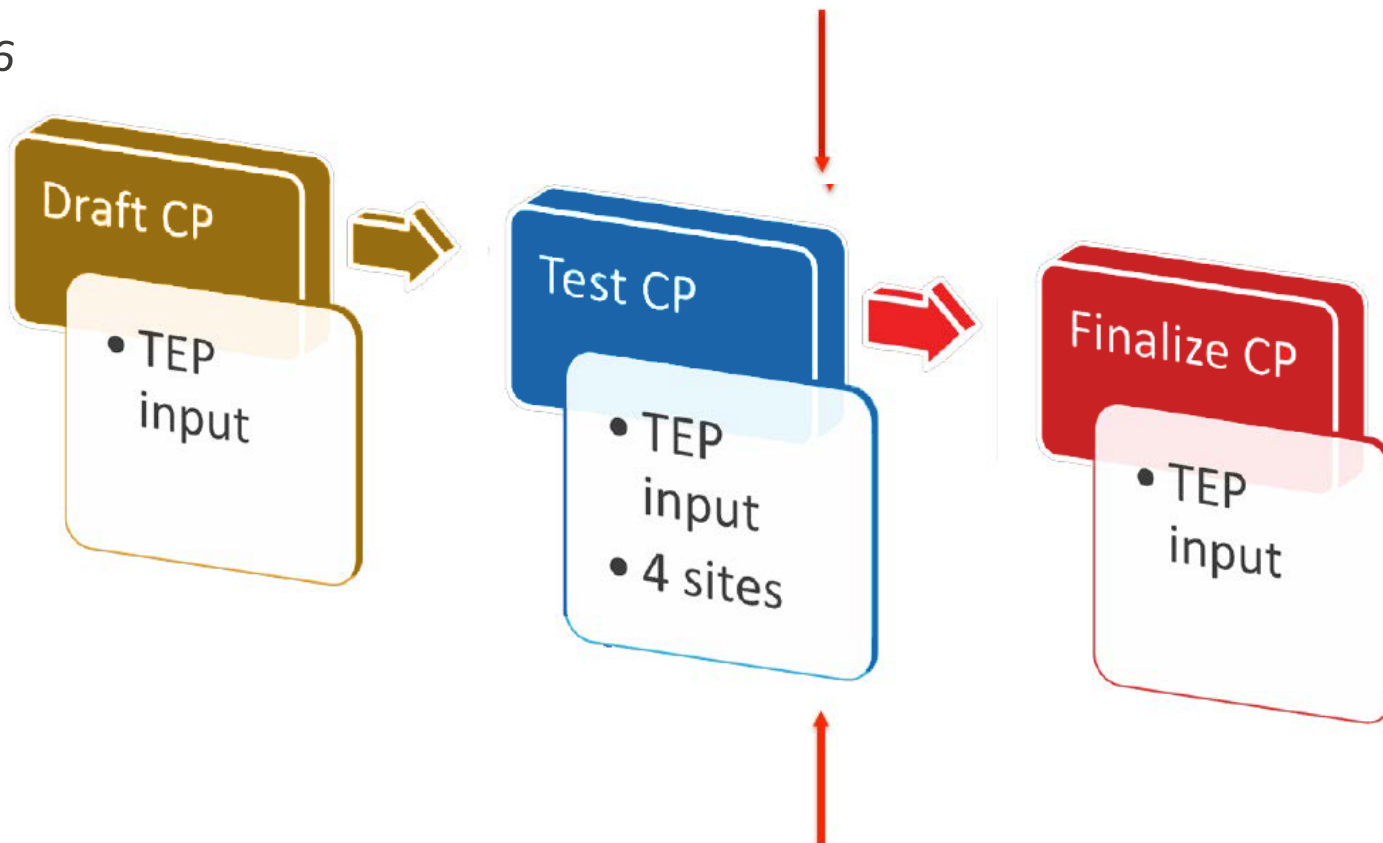

Project activities

- Project team

Memory Aids

Error Anticipation

Resource Gaps

- General lack of applicable tools and resources
- Lack of detailed, step-by-step “how to” guidance
- Variability of user need

Roles	Administrative Expertise	Clinical Expertise	Informatics Expertise	Usability Expertise
Practice Manager				
Physician				
Informatics RN				
Director of Informatics				
CMIO				

Optimization through the Change Package

- Step-by-step vignettes to demonstrate tool usage
- Design around variable user needs

Roles	Learn about Usability		Identify Problems and Approaches		Identify Tools and Implement	
	Introduction & EHR Checklist	Preparing For Change	Problem Finding	Locating a Tool	Implementing a Tool	Additional Resources
Practice Manager						
Physician						
Informatics RN						
Director of Informatics						
CMIO						

The Usability Change Package (UCP)

- Laura Marcial, PhD Health Research Scientist, RTI International

Usability Change Package: Introduction and Navigation

Healthcare

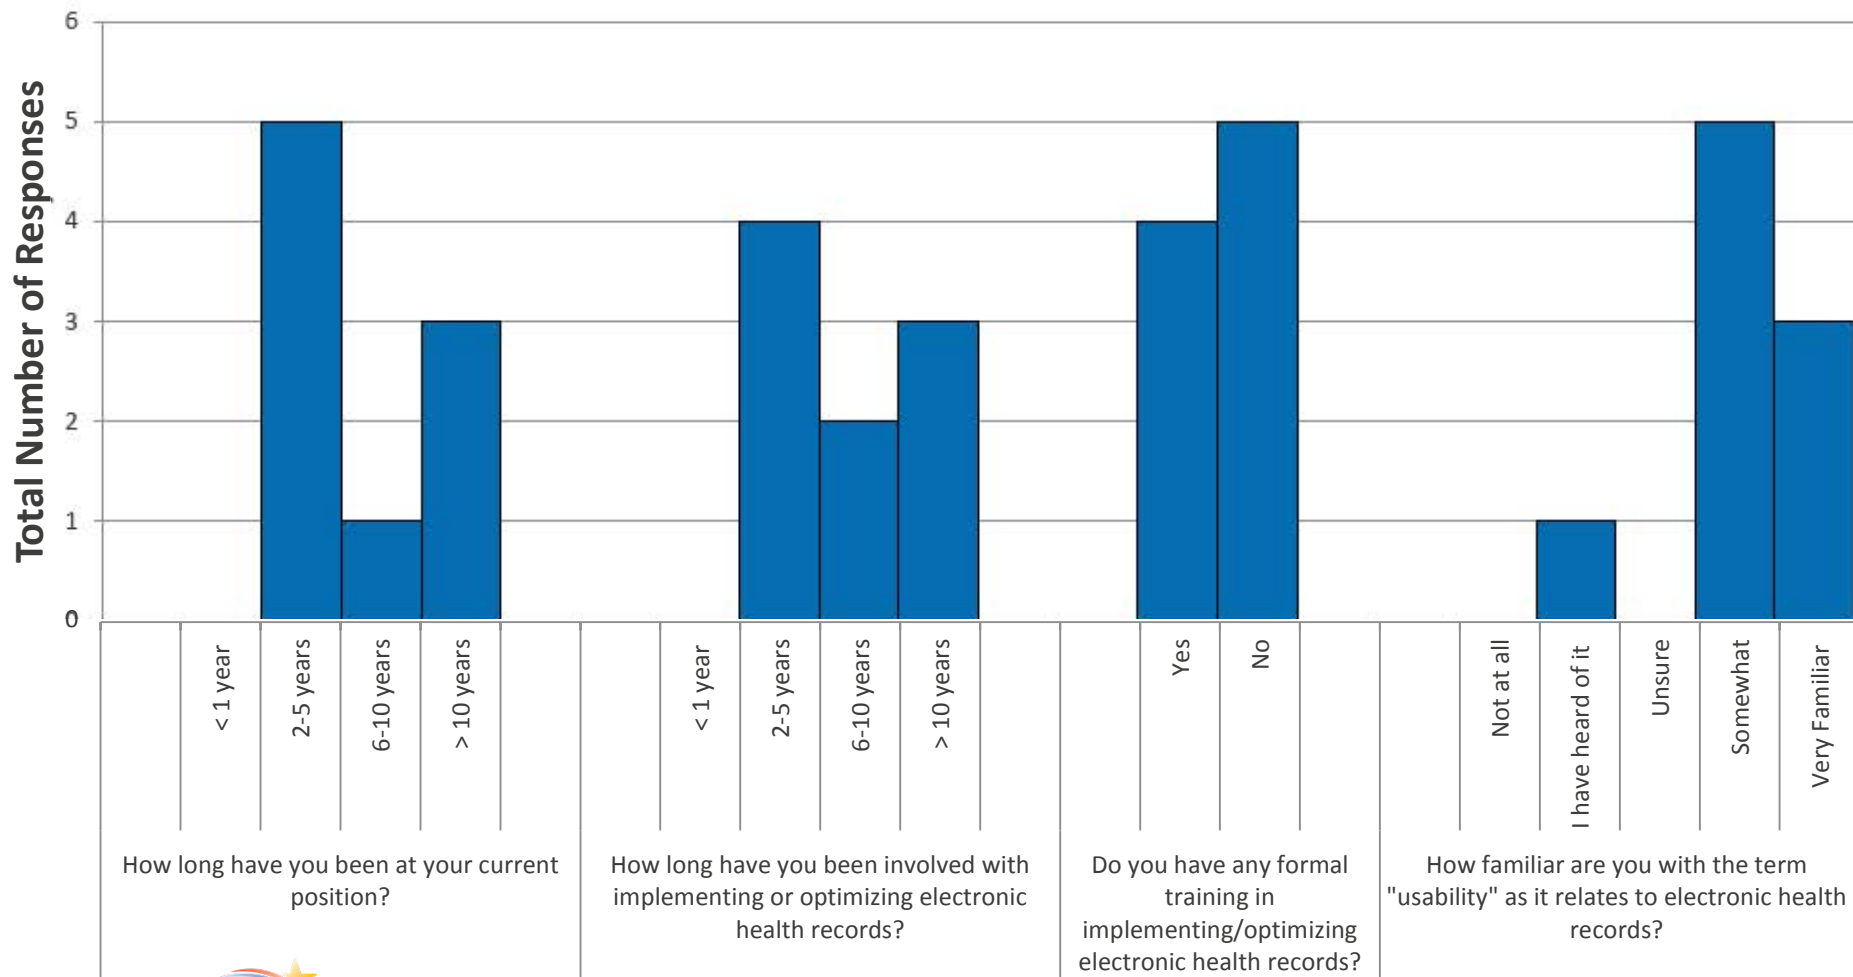

Test Sites Overview

#	Care Setting	Population Served	Resource Availability	End User(s)
1	Ambulatory	Suburban	Lower	<ul style="list-style-type: none">• Practice Manager• Physician
2	~100 Bed Hospital	Suburban/Rural	Higher	<ul style="list-style-type: none">• Director of IT• Clinical Informatics Specialist
3	Ambulatory	Rural	Lower/Moderate	<ul style="list-style-type: none">• Regional Medical Director
4	~700 Bed Hospital	Urban	Higher	<ul style="list-style-type: none">• CMIO• Nursing Informaticist• Clinical Performance Specialist

Site Familiarity with EHR Usability

Survey Responses

(N = 9)

Site-Specific Projects

Site 1: Project: Optimizing the workflow of communication around surgical orders and scheduling

- Outcome: Changed internal workflow, Vendor Collaboration

Site 2 Project: Implementing EHR radiology Clinical Decision Support (CDS)

- Outcome: EHR Upgrade Challenges, Regulatory Coordination

Site 3 Project: Effect of EHR Upgrades on Colon Cancer Screening

- Outcome: Impact of EHR upgrades on quality metrics, Increased awareness for near-future EHR conversion

Site 4 Project: Integration of a patient transportation communication system integrated into the EHR to prevent delays and patient safety events.

- Outcome: Assessment of EHR Usability, *Pending data analysis

- Workflow analysis and data collect assists assisting with optimization
- Role of EHR with quality metrics
- Coordination with EHR improvements and regulatory requirements
- Communication between the healthcare organization and the EHR vendor is critical to success
- Unintended consequences of EHR software upgrades on usability improvements

- Justin Cross, MD
ONC Medical Director for
Systems Safety, US
Department of Health &
Human Services

QUESTIONS AND DISCUSSION

THANK YOU FOR YOUR PARTICIPATION
