eClinicalWorks

Interoperability has always been a priority for eClinicalWorks. As vendors, we have a responsibility to make pertinent information accessible to patients and their physicians. We are committed to aiding our customers in sharing pertinent health data that will lead to delivering better care.

We pledge these three commitments:

Consumer Access: To help consumers easily and securely access their electronic health information, direct it to any desired location, learn how their information can be shared and used, and be assured that this information will be effectively and safely used to benefit their health and that of their community.

No Blocking/Transparency: To help providers share individuals' health information for care with other providers and their patients whenever permitted by law, and not block electronic health information (defined as knowingly and unreasonably interfering with information sharing).

Standards: Implement federally recognized, national interoperability standards, policies, guidance, and practices for electronic health information, and adopt best practices including those related to privacy and security.

eClinicalWorks supports multiple options for physicians to exchange patients' medical information and break down the barriers that have stood in the way of nationwide data exchange. Here are some of the initiatives we take part in:

CommonWell Health Alliance: eClinicalWorks is a Contributing Member of the CommonWell Health Alliance and commits to offering CommonWell services to its customers. CommonWell will allow providers to communicate across the country with any provider also participating in CommonWell. CommonWell and its members are producing and deploying real-world, cross-vendor interoperability services that will contribute to improved healthcare delivery and outcomes for providers and the people they serve.

The Sequoia Project – Carequality: eClinicalWorks is also a member of Carequality, by The Sequoia Project, a public-private, multi-stakeholder collaborative that strives to improve the barriers often associated with interoperability in the healthcare realm.

Direct Trust: eClinicalDirect is fully-accredited under the Direct Trust bundle and is Electronic Healthcare Network Accreditation Commission (EHNAC) certified. eClinicalWorks simplifies interoperability in healthcare through the use of DIRECT messaging for Meaningful Use Stage 2 using IHE standards and secure email service to transfer CDA documents. This seamless data transfer between systems promotes coordination of care between all healthcare settings for accurate sharing of data at the point of care.
