Administration for Community Living & ONC October 16, 2014

Long-term services and supports—for whom and by whom?

LTSS recipients in residential households are **16%** African American, **10.4%** Latino, **3.1%** Asian, and **2.4%** Native American 26.2% of LTSS recipients in residential households live alone

89.4% have mobility impairment, 55.3% have cognitive impairment, 30.7% have sensory impairment

1.8 million people

need LTSS in institutional settings—86% of them elderly 92% receive unpaid care

from family or friends spouses, 32.1%; sons or daughters, 36.9%; parents, 10.2%; non-relatives, 22.9%

10.9 million people

need LTSS in community settings—50.2% of them non-elderly, 3.6% below age 18

People age 65+

increased 15.1% since 2000—11,000 baby boomers become eligible for Medicare each day

Advances in Meaningful Use of EHRs: Summary of Care for Transfers of Care

- Doctors and hospitals that are referring patients to another setting or provider of care must provide a summary of care record for more than 50 percent of transfers, electronically for more than 10 percent of transfers.
- HIT Policy Committee's recommendations for Stage 3 would include (at provider's discretion):
 - Overarching patient goals and/or problem-specific goals
 - Information about known care team (including designated caregivers)
 - Patient instructions

Types of transitions:

- Transfers from one site of care to another, e.g. primary care physician, hospital, skilled nursing facility, home, etc.
- Referral or consultation, e.g. primary care physician to specialist, skilled nursing facility to emergency department

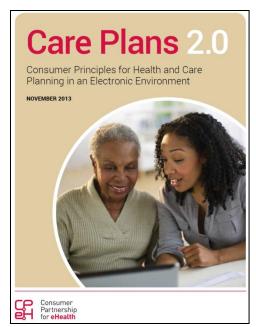

What We Need: Person- & Family-Centered Health and Care Planning

What Consumers Want:

Care Plans 2.0

- ▶ A multidimensional, personcentered health & care planning process facilitated by a dynamic, electronic platform that connects individuals, their family and other personal caregivers, paid caregivers (such as direct care workers and home health aides), and health care and social service providers, as appropriate.
- The care plan supports all members with actionable information to identify and achieve the individual's health and wellness goals.

Sneak Peek: Recent NPWF National Survey Added Caregiving Questions

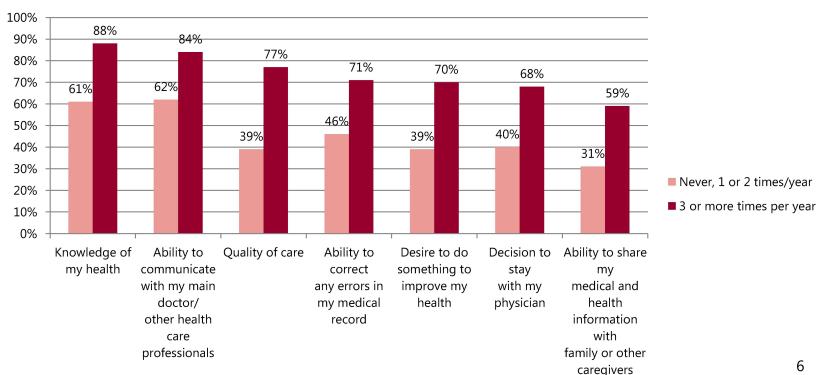

- National Partnership commissioned Harris Poll to conduct a second nationally representative survey in April-May 2014
- Total respondent pool comprised 2,045 adults who
 - ► Had an ongoing relationship with a main doctor
 - Knew what kind of record system—electronic or paper—the doctor used
 - ▶ 1,192 respondents in EHR systems, 853 in paper-record systems
- Oversamples of Latino, Black & Asian communities, and offered in Spanish
- New survey questions on
 - Caregiving
 - Care planning and goal setting
 - Mobile access

Sneak Peek: Frequent Online Access **Impacts Caregiving**

Online Access to My Medical and Health Information Has a Very or Somewhat Positive Impact on These Domains, by **Frequency of Access**
