

We, Practice Fusion, share the principle that to achieve an open, connected care for our communities, we all have the responsibility to take action. To further these goals, we commit to the following principles to advance interoperability among health information systems enabling free movement of data, which are foundational to the success of delivery system reform.

1. **Consumer access:** To help consumers easily and securely access their electronic health information, direct it to any desired location, learn how their information can be shared and used, and be assured that this information will be effectively and safely used to benefit their health and that of their community.
2. **No Blocking/Transparency:** To help providers share individuals' health information for care with other providers and their patients whenever permitted by law, and not block electronic health information (defined as knowingly and unreasonably interfering with information sharing).
3. **Standards:** Implement federally recognized, national interoperability standards, policies, guidance, and practices for electronic health information, and adopt best practices including those related to privacy and security.

Work Practice Fusion is doing to support these principles:

Practice Fusion is committed to the free flow of clinical information to serve the needs of patients and those healthcare professionals caring for them. Since the inception of our company our mission has been: Connecting doctors, patients and data to drive better health and save lives. Our technology stack, product offering and partner affiliations support this commitment, and we have developed an electronic health record (EHR) platform that supports the ability to access and share clinical information and enable care coordination transactions. For more than five years we have worked with partners to provide APIs that facilitate and encourage data sharing. Today, we have over 600 partners connected to our EHR platform that enables collaboration across disparate IT systems. Our cloud-based EHR is uniquely positioned to facilitate efficient and effective information sharing on a scale unmatched in the ambulatory market. We are continuing our interoperability efforts in support of the Meaningful Use Stage 3 requirements and we are fully committed to a connected healthcare ecosystem.
