

Community Living

The possibilities created through the marriage of
caregivers and technology

Finding the intersection between person-centered plans and technology

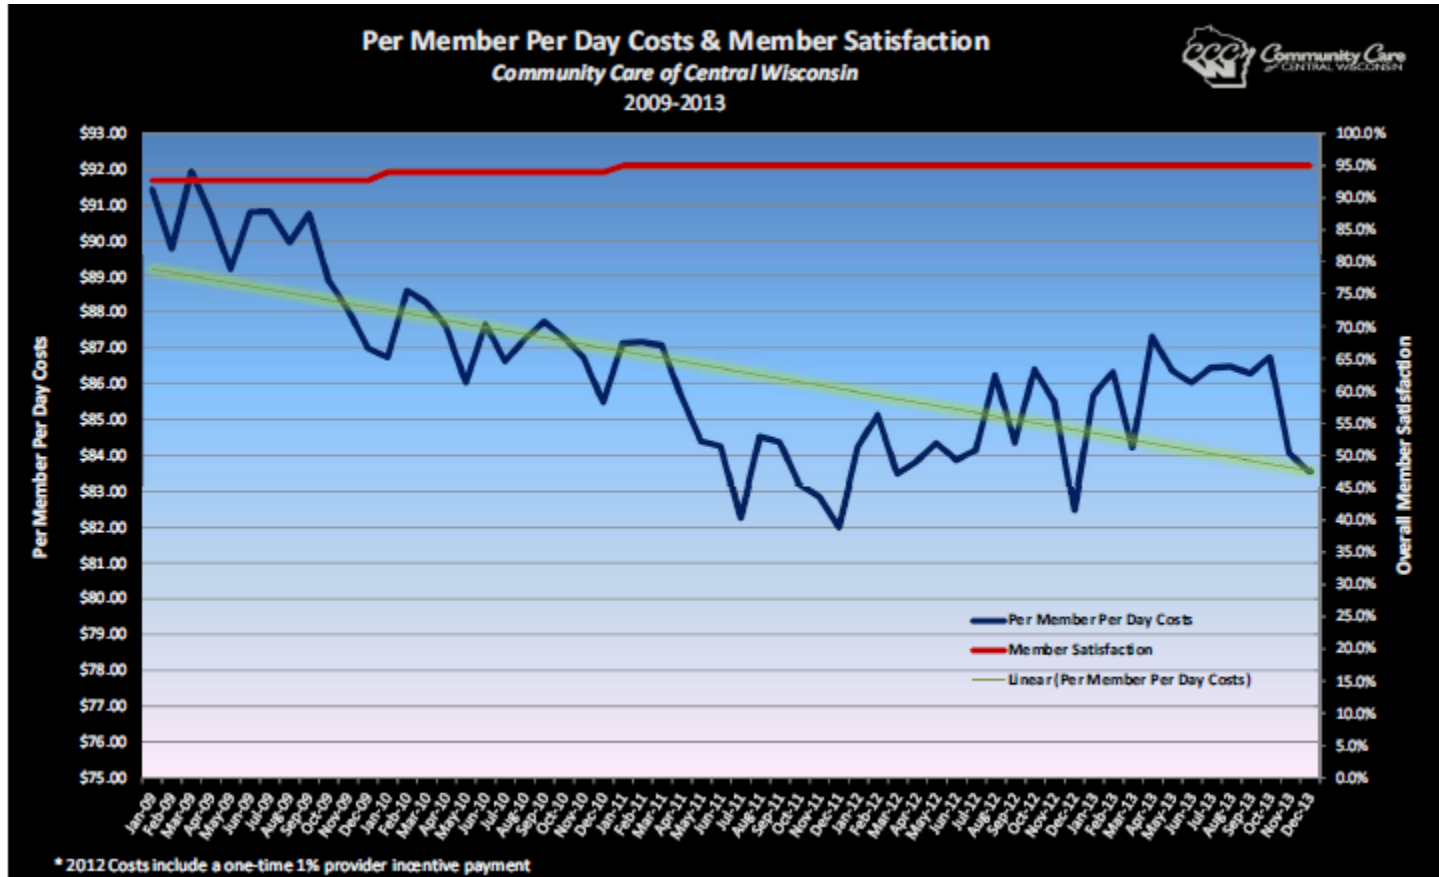

- Data collected in a digital format allows for automated analytical evaluation of historical choices to predict future behavior, making behavior-prevention strategies more effective
- New opportunities to change existing care models—care models to provide person-centered services at lesser costs

Community Living Program

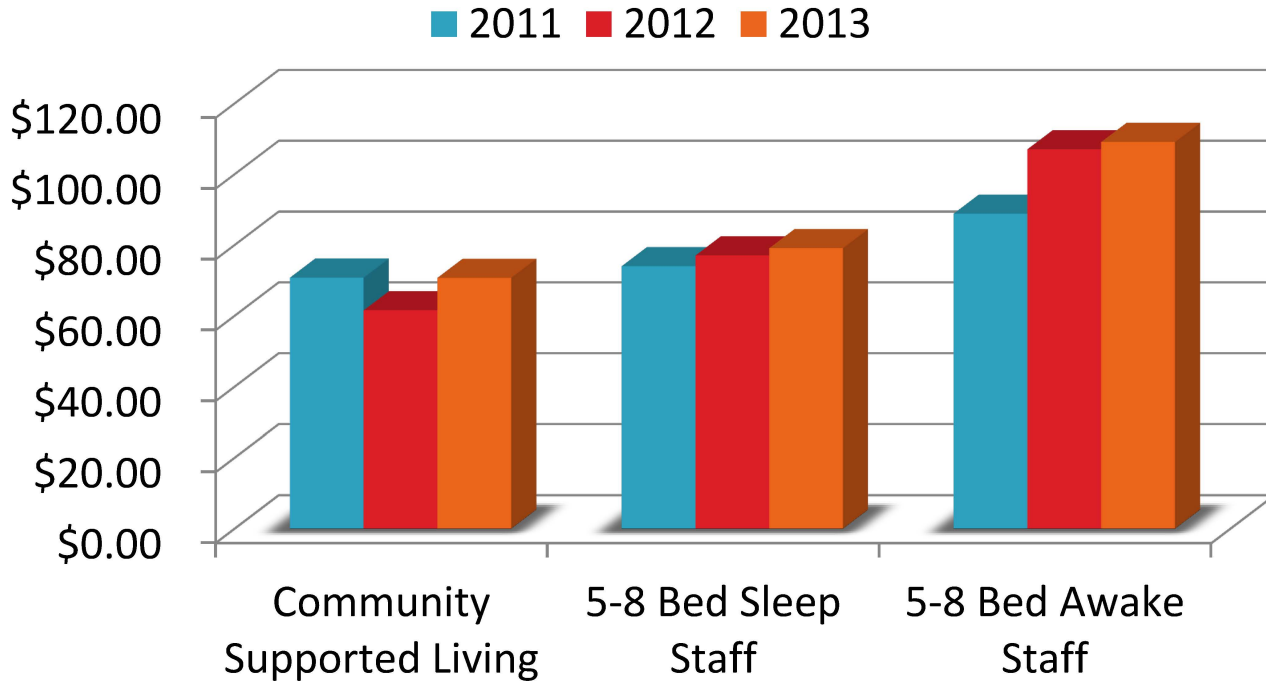

- Assess/Identify outcome – change both how the goal is reached (self-directed) and funded (hourly to daily).
- Provide supports when needed/requested and minimize/eliminate “just in case” staffing scenarios.
- Support the entire person, not just a few needs.
 - Wrap around services
 - Each person shares goal to live a self-directed life as a full citizen of their community.
- Intense supports when needed, broaden “just in case” supports across a greater area.
- Inclusion of natural supports to meet outcomes

High Quality and Cost Effective
