

How Immunization Information Systems Can Help Doctor's Offices

Agenda

- Immunization Information Systems
 - Meeting Meaningful Use
 - State Variation
- ONC and CDC Collaborations
 - Clinical Decision Support for Immunization (CDSi)
 - Cross Jurisdictional Data Exchange
 - Consumer Access
- Panelist Comments
 - Questions

Immunization Information Systems

- Consolidated immunization history across providers
- Forecasting
- Produce official Immunization Certificate
- Vaccine inventory
- Interface with EHRs

Meeting MU through IIS

Who: PHA to CMS
When: Begin in late-summer
2013

Declaration of Readiness

Public health
agency (PHA)
notifies the
Centers for
Medicare and
Medicaid Services
(CMS) what public
health objectives it
can support.

Who: EPs and EHs to PHAs When: Before 60th day of reporting period

Registration of Intent

Eligible
professionals
(EPs) and eligible
hospitals (EHs)
notify PHA in
writing what public
health objectives
they seek to meet.

Who: EPs and EHs to PHAs When: Following registration and in response to PHA requests for action

On-Boarding

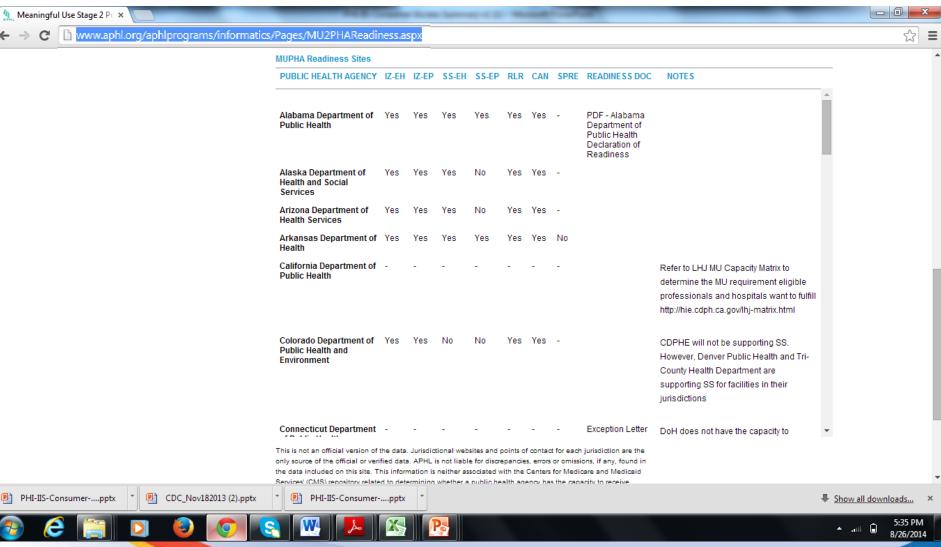

EPs and EHs work with PHAs to establish on-going MU data submission. Who: PHA to EPs and EHs When: Upon successful submission of public health MU data to PHA

Acknowledgment

PHAs affirm that
EPs and EHs
have successfully
submission with a
written affirmation.
EPs and EHs may
use the
acknowledgment
for MU attestation
requirements.

Find out about your state

Making it easier to connect with IIS: Decreasing state variability

- Differing standards across states have been a challenge for EHR vendors and providers
 - Dose size, VFC status
- American Immunization Registry Association (AIRA) and CDC promoted new HL7 Implementation Guide to address and reduce variability (v 2.5.1, r. 1.5)
- Agreement among IIS to standardize on transport layer

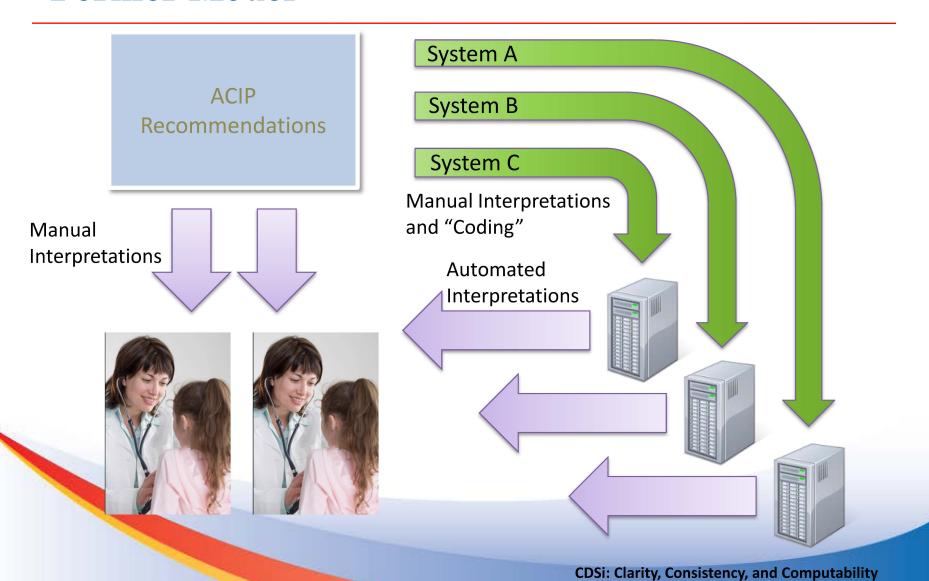

Clinical Decision Support for Immunization (CDSi)

The CDSi resources bridge the gap between the scientific ACIP recommendations and the IT world of computer systems

- Designed to work in a wide variety of computer systems
 - Doesn't require a single tool to be used
 - Need to able to support all software tools using ACIP logic
- Promotes consistent interpretation of ACIP recommendations in a wide variety of tools
- Helps ensure a patient's immunization status is current, accurate, and consistent regardless of where the provider is located in the US

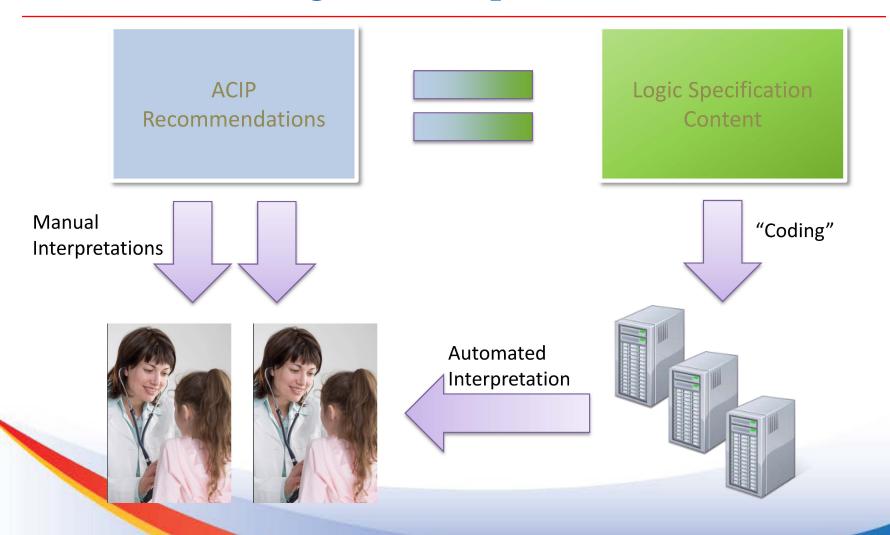

Former Model

How CDSi Bridges the Gap

Cross Jurisdictional Exchange of Immunization Data

Current IIS Data Exchange

- Limited exchange across jurisdictions
- This exchange is currently done point-to-point; mainly batch files; not real time

ONC Initiative

- Pilot states will transfer data via a data hub with partner jurisdictions
- Pilot states will use an adapted version of the CDC Web Services Definition Language (WSDL)
- Pilot states will use the HL7
 Immunization Implementation
 Guide V1.5 (HL7 2.5.1 IZ IG V1.5)

Future?

- All IIS will interface with the hub and exchange data will all other IIS
- All IIS will use the adapted CDC WSDL and HL7 IZ IG V1.5

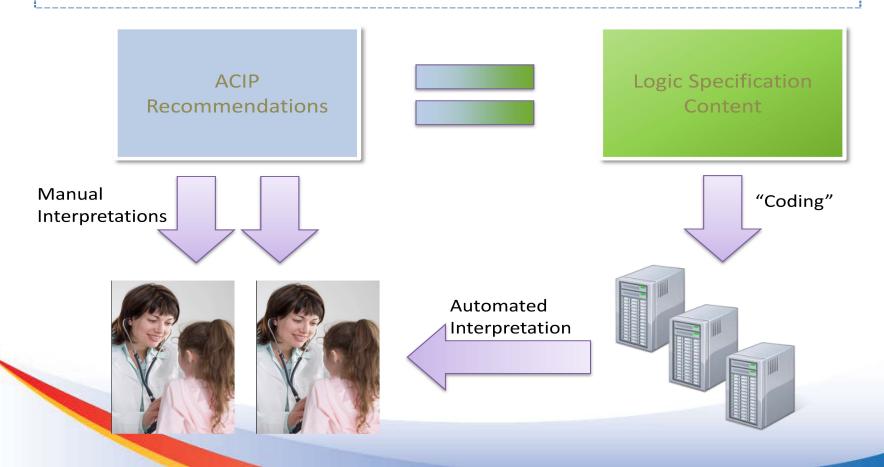

Advantage of HUBsolution:

- Promotes use of adapted CDC WSDL and HL7 IZ IG V1.5 which will drive interoperability
- Will improve use of bidirectional querying by IIS
- Scalable solution
 - More IIS can easily be added to the hub
 - IIS will be able to theoretically communicate with any other IIS on the hub

IIS Data Exchange Use Case Diagram

Use Case Objective: For an Immunization Information System (IIS) to respond to a transaction that contains current or historical addresses that are outside its jurisdiction by triggering a QBP or VXU to the other jurisdiction's IIS.

Consumer Access to IIS – Two models

- Access through IIS Portal
 - Stand alone IIS Portal for Consumers
 - Physician mediated authentication of patient
- Access through EHR Patient Portal or PHR
 - Interface with IIS to provide history and forecast
 - Trust EHR/PHR for authentication
