

January 25, 2016

Aprima Medical Software, Inc., strongly believes that to achieve open and connected care for our communities, the entire EHR industry and providers have the responsibility to take immediate and universal action. To this goal, we commit to the following principles and objectives to advance interoperability among health information systems enabling free movement of data, which are foundational to the success of delivery system reform.

1. **Consumer access:** To help consumers easily and securely access their electronic health information, direct it to any desired location, learn how their information can be shared and used, and be assured that this information will be effectively and safely used to benefit their health and that of their community.
2. **No Blocking/Transparency:** To help providers share individuals' health information for care with other providers and their patients whenever permitted by law, and not block electronic health information (defined as knowingly and unreasonably interfering with information sharing).
3. **Standards:** Implement federally recognized, national interoperability standards, policies, guidance, and practices for electronic health information, and adopt best practices including those related to privacy and security.

To implement these commitments, we are or will be testing and piloting open APIs, interchanging of industry standard documents, and assisting our customers in exchanging information securely in the Healthcare community.

Sincerely,

[signed]

Neil Simon
COO
