

Panel Questions

General Questions:

Model Description

1. Describe the “advanced health model” your community/organization has implemented. Please address the following:
 - Why is this model expected to have an impact on health equity and on individual and population health?
 - How are you using health IT tools to support coordinated, integrated health and care including other objectives within the model? How are you bringing different data sources together under this model? What human services data is most impactful and what standards exist to support its use?
 - What impact have you seen from this model/how will you evaluate future impacts?
 - What is the current business case for this model? How will this model achieve sustainability?
 - How are you engaging the individual as a partner in this model?
2. How are you partnering with stakeholders outside your immediate organization and discipline to support your model? What resources do they need to be successful? How did you engage leadership to obtain buy-in?
3. What have been the major successes and challenges in establishing this model, especially with respect to technology systems and supports? How did you address these challenges?

Opportunities and Barriers for Advanced Health Models

1. What privacy, governance, or other considerations must be addressed to enable data sharing across clinical and community/social service partners, including behavioral health?
2. What are key policy barriers at the local and national hindering broader adoption of this model? What are key policy opportunities that would enable this model to scale more broadly?
3. What investments need to be made to ensure community based medical services and non-medical services can communicate electronically and collaborate effectively with other stakeholders?
4. What are the biggest hurdles to interoperability among health care, human services, and community systems?

Specific Panel Questions:

PANEL I: How Advanced Health Models Integrate Data across Service Delivery to support Health for Individuals

- Describe how your model places the individual and the community at its center and what needs to happen to enable medical centric models to evolve to this point?

PANEL II: How Advanced Health Models are Supporting Whole Health and Wellness for the Individual across the continuum

- How can health information technology enable the transformation of health and care delivery to provide health and human services and support individuals in community settings? How are clinical encounters in advanced health models focused on care beyond the clinical visit viewed from the individual's perspective?

Panel III: How Advanced Health Models are Supporting Integrated Care for Individuals with Complex, Chronic Conditions

- How is health IT used to identify and to support high risk individuals across settings, over time and what tools are utilized to inform social determinants information as available at the individual and data system level?
