HITECH Goal

“The utilization of an electronic health record for each person in the United States by 2014”

Perspectives on progress to goal

For what share of persons in the US is an EHR being used?

Provider perspective

What share of providers are using EHRs?

Encounter perspective

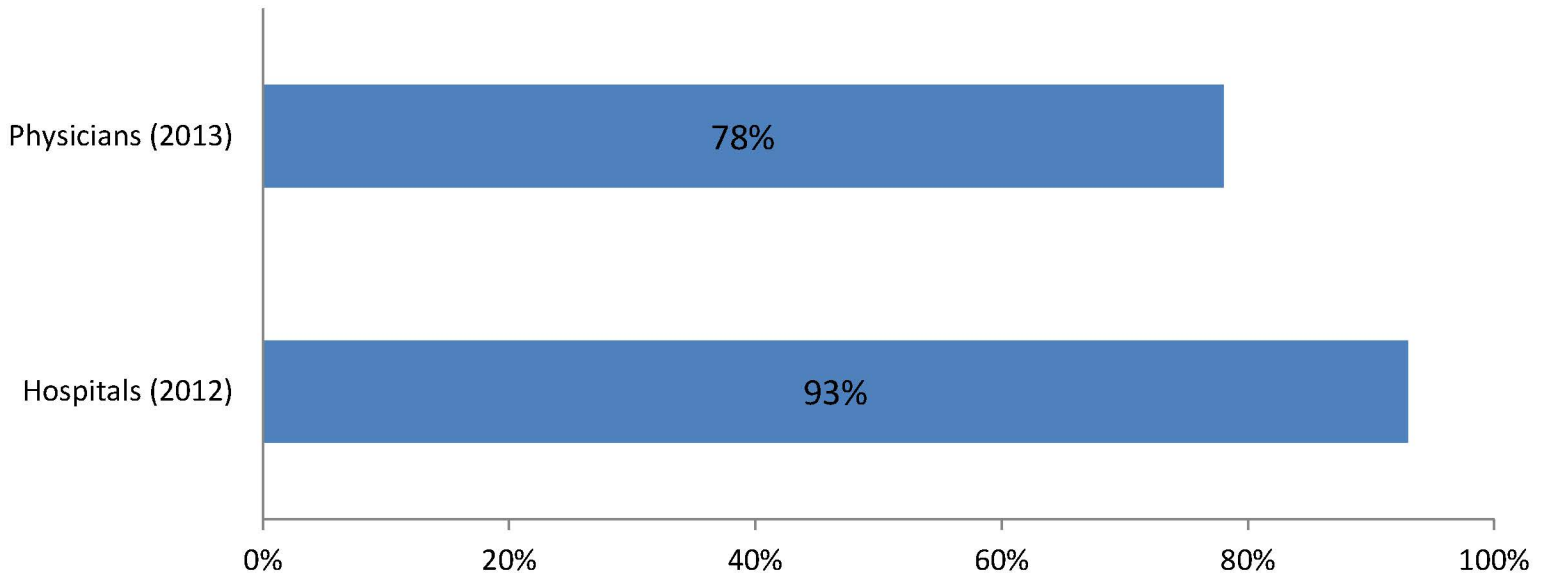

What share of health care encounters take place at providers using EHRs?

Person perspective

What share of people have their medical record in an EHR?

Provider perspective

Percent of office-based physicians and acute care hospitals with any EHR

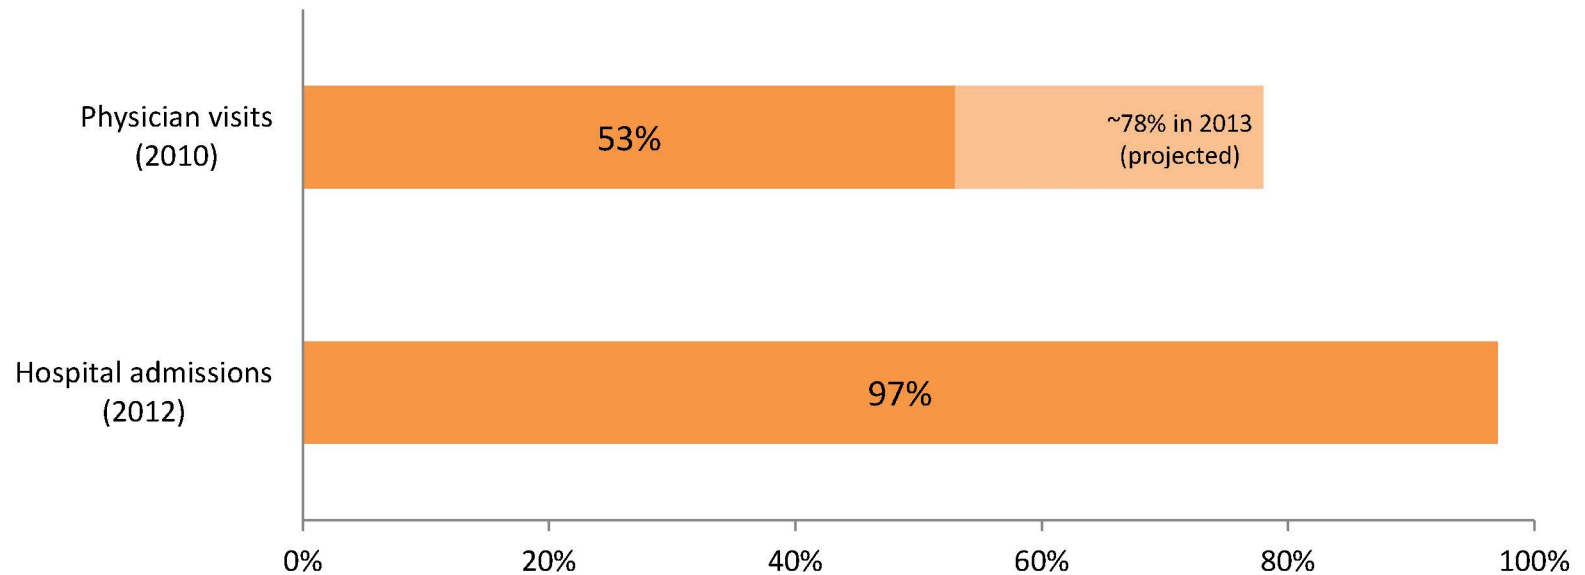

Note: Estimates are the percent of non-federal office-based physicians excluding radiologists, pathologists, anesthesiologists and percent of non-federal acute care hospitals with any electronic health record. "Any EHR" is a medical or health record system that is either all or partially electronic (excluding systems solely for billing).

Source: 2013 National Ambulatory Medical Care Survey Electronic Health Record Survey and 2012 American Hospital Association Annual Survey Information Technology Supplement.

Encounter perspective

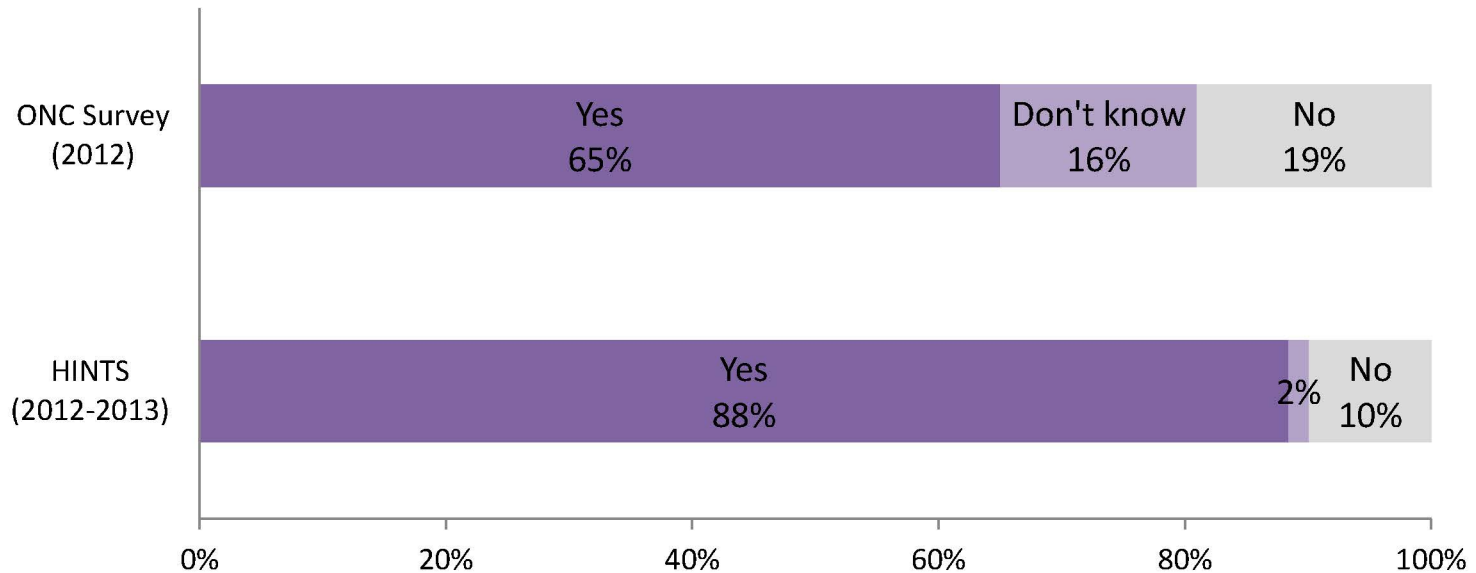

Percent of office-based physician visits and acute care hospital admissions at providers with any EHR

Note: Estimates are the percent of visits to non-federal office-based physicians excluding radiologists, pathologists, anesthesiologists and percent of admissions at non-federal acute care hospitals with any electronic health record. "Any EHR" is a medical or health record system that is either all or partially electronic (excluding systems solely for billing). In 2010, the share of physician visits to physicians with any EHR (53%) was the same as the share of physicians with any EHR (52%); the projected 2013 estimate assumes this same pattern.

Person perspective

Percent of adults who report that any of their medical providers maintain their information in an EHR

Note: Estimates are representative of the US civilian non-institutionalized population ages 18 and older. Respondents were asked whether, as far as you know, any of your health care providers maintain your medical information in a computerized (HINTS) / electronic (ONC Survey) system.
