The University of Texas
Health Science Center at Houston

Disclosures

- No real or perceived conflicts to disclose
- Dr. Fairbanks receives research grant funding from AHRQ and NIBIB

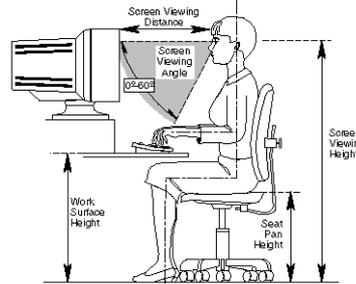

Human factors center... inside a large health system

- MedStar Institute for Innovation
 - Catalyze innovation
- MedStar Health
 - 10 hospitals, 20 diversified healthcare corporations
 - 120 Affiliated and employed physician practices
- National Center for Human Factors in Healthcare
- Physicians with HFE expertise
- PhD & MS Human Factors Scientists, clinicians, nurses

Human Factors Engineering:

Optimize the relationship between technology and the human user

“We don’t redesign humans; We redesign the system within which humans work”

Vendor User Centered Design Liaison Project

- Goal: Understand vendor UCD processes and challenges
- Contractors to ONC (via the SHARPC Program of the University of Texas)
- National Center for Human Factors in Healthcare team:
 - Raj Ratwani, PhD, Project Director & Co-PI
 - Terry Fairbanks MD MS, Co-PI
 - Zach Hettinger MD MS, Co-inv
 - Vicki Lewis, PhD, Co-inv
 - Nat Benda BS, RA

Vendor User Centered Design

- Objective:
 - Understand vendor UCD processes and challenges
 - UCD: any formalized process for incorporating user needs throughout design, development and usage
- Method:
 - Onsite meetings primarily with:
 - Usability experts
 - Business Analysts
 - Product Managers

Summary of Vendors Visited

Vendor	Est. Revenue	Employees	Usability Staff
Vendor A	\$1 billion	5000+	20-30
Vendor B	\$300-500 million	2000	30+
Vendor C	\$100-200 million	500	NA
Vendor D	\$100-200 million	2000	30+
Vendor E	\$40 million	500	1-5
Vendor F	\$20 million	250	1-5
Vendor G	\$20 million	150	NA
Vendor H	\$10 million	60	NA
Vendor I	\$300,000	10	NA
Range	\$300,00 - \$1 billion	10-5000+	0-30+

Categories of Vendor UCD

No True UCD

- Focused on customer requests
- Responding to user feedback is UCD
- No formalized method for incorporating and testing user needs throughout design and development

Basic UCD

- Understand UCD and its importance
- Striving to implement UCD processes
- UCD is not fully integrated yet

Well Developed UCD

- Rigorous UCD processes in place
- Efficient testing methods
- Extensive infrastructure

Challenges

No True UCD

- Context and exposure
- General process
- Support

Basic UCD

- Resources
- Participant access
- Use case development

Well Developed UCD

- Detailed work flow analysis
- Safety data

General

- Timelines and summative testing
- Legacy systems and the patient

Customization and Training Challenges

- Customization
 - Significant change to the certified EHR
- Training
 - Cannot makeup for usability shortcomings
 - Training is often offered as an added cost
