

Guidelines for Pre-loading Immunization Registries Test Data

Certification Criterion

- §170.314(f)(2) - Transmission to immunization registries

General Instructions

1. The EHR Vendor SHALL create the messages live for all test cases (regardless if pre-loaded or live-load), and the Authorized Test Lab (ATL) will validate the messages using the associated Test Tool
2. It is recommended that the ATL modify a few data elements in the test data that are pre-loaded (for example, a lab result value may be modified from the lab result value provided in the test data)

Specific Instructions

- Prior to initiation of the certification testing for the §170.314(f)(2) Transmission to immunization registries criterion, the EHR Vendor will pre-load all test data for all Test Cases provided
- The ATL will select a Test Case from Test Scenario #7 (Complete Record) for the EHR Vendor to reload
- The ATL will select at random one other Test Case for the EHR Vendor to reload
- The EHR Vendor will create messages for each of the 7 Test Cases selected by the ATL (one test case from the 7 test scenarios)
