

Add Your Project to the IPG

Instructions: Please use the sections below to share some basic information about your project and add it to the IPG. Click [here](#) to see a complete, best practice example and look over the following tips.

- Consider including project information that will help others learn more about your work such as a project title, a brief description, and a hyperlink to your specific project's website (if one is available). If you need help, click the "?" to the right of a section box and a best practice example will slide out.
- The "Additional Project Information" box will allow you to tag your project with its start and projected end date, any technical standards your project is piloting (clickable popular tags are displayed to the right) and the zip code associated with the lead project personnel/organization. This information will help others find your project quickly and populate the interactive map.
- Once you have added your project, you will be the only one able to edit it and may do so at any time. The edit page includes more space if you want to share additional information at a later date, such as your project's results.

Section 1

e.g. Data Access Framework (DAF) Pilot - PopMedNet

e.g. Data Access Framework (DAF)

Section 2

e.g. DAF is currently interviewing interested pilot sites and reviewing their abilities to meet the minimum set of requirements for Phase 3 pilots and Lincoln Peak is one of the pilot sites. Lincoln Peak is the technology company that developed PopMedNet and hosts and supports the PCORnet and FDA Sentinel Networks. Lincoln Peak also provide support to groups
